

SUMMARY

Power Platform Developer with 3+ years of experience in building scalable business applications using Microsoft Power Platform. Skilled in Power Apps (Canvas & Model-Driven), Power Automate, Dataverse, and SharePoint for developing efficient and user-friendly solutions. Experienced in workflow automation, system integration using REST APIs, and implementing secure, role-based access (RBAC). Strong problem-solving abilities with a focus on performance optimization and delivering reliable, business-driven applications.

EDUCATION

Indus University

Master of Computer Application
2021 - 2023

Som-lalit College Of Computer Application

Bachelor of Computer Application
2018 - 2021

SKILLS

Power Platform Domination:

- Power Apps (Canvas & Model-Driven), Power Pages, Power Automate (Cloud Flows, Process Automation), Power Fx (Formulas & Logic), PCF (React, TypeScript)

Data Engineering & Management:

- Dataverse, SharePoint Lists & Libraries, Power BI, REST API & Custom Connectors

Security & Environment:

- User Roles & Permissions (RBAC), Environment Management (Dev/Test/Prod), Solution Management (ALM), Access Control & Data Security (DLP)

Debugging:

- Bug Fixing & Issue Resolution, Error Handling & Logging, Troubleshooting & Root Cause Analysis

Tools & Source Control:

- Git, GitHub, Bitbucket, Azure DevOps, VS Code, Postman

PROFESSIONAL EXPERIENCE

Power Apps Developer, SPETEQ Technologies

Feb 2025 - Present | Ahmedabad, Gujarat

- Solution Design & Development** - Architected and delivered scalable Power Apps (Canvas & Model-Driven) with intuitive UI and robust functionality.
- Process Automation** - Engineered automated workflows using Power Automate to streamline operations and enhance efficiency..
- Data & Integration Management** - Managed Dataverse and SharePoint data models, integrating external systems via REST APIs & Custom Connectors.
- Security & Lifecycle Management** - Implemented RBAC, managed environments (Dev/Test/Prod) and handled solution deployments using ALM practices.
- Performance Optimization & Troubleshooting** - Diagnosed and resolved issues through advanced debugging and root cause analysis, ensuring high performance and reliability.
- Low-Code App Development (Zoho Creator)** - Built an automated Job & Inventory application from scratch; programmed complex Deluge scripts for real-time pending quantity math, multi-form data sync, and strict dispatch limit validations.

Flutter Developer, Silverstar Infosystem

Aug 2023 - Dec 2025 | Ahmedabad, Gujarat

- Developed and maintained Flutter applications with focus on performance and scalability.
- Designed clean and user-friendly UI for better user experience
- Integrated REST APIs and Firebase for data handling and backend connectivity.
- Collaborated with designers and QA team for smooth application delivery.
- Performed debugging and code optimization to ensure stable and reliable apps.

Mobile App Developer Intern, Tops Technologies

Jan 2023 - Jun 2023 | Ahmedabad, Gujarat

- Gained hands-on experience in Power Apps development through active involvement in real-world projects.
- Collaborated with senior developers to debug and optimize applications, improving efficiency and performance.
- Applied industry best practices in low-code app development, ensuring scalability and usability in business solutions.

PROJECT EXPERIENCE

Crompton - Enterprise Project & Task Orchestration System

- Engineered a scalable project management platform using a custom-built Canvas App to centralize project planning, task tracking, and team collaboration, delivering intuitive user experiences with role-based access control (RBAC) for secure, user-specific dashboards, designed and optimized a robust Dataverse data architecture with complex relationships to efficiently manage projects, tasks, users, and milestones, and leveraged collections and optimized queries to ensure high performance with large datasets, seamlessly integrated Microsoft Planner via Power Automate to enable real-time task creation and bidirectional synchronization of key attributes such as timelines, priorities, and assignments, implemented intelligent task distribution logic allowing managers to dynamically allocate work across multiple users and Planner buckets, enabled real-time progress monitoring with dynamic status indicators and project health insights including completion tracking and overdue analysis, triggered automated Microsoft Teams notifications and Outlook alerts for instant updates on assignments and changes, and enforced strong data validation, error-handling mechanisms, and governance practices to ensure data accuracy, consistency, and enterprise-grade reliability across the system.

Phaidros Healthcare - Packaging Variant Management System

- Architected and delivered a Model-Driven application for end-to-end packaging variant management, designing relational data models in Dataverse to handle complex entity relationships, implemented advanced JavaScript-based business logic for dynamic field behavior including auto-generation of Packaging ID and intelligent File Name creation based on Product, Manufacturer, Image Code, and Variant Version, enforced conditional field enablement and validation logic to guide user input flow, developed version control logic for Image Codes to automatically generate sequential variants (v1, v2, v3) by validating existing records, built a centralized Image Code generation module with automated sequencing based on packaging type selection, integrated document management by enabling attachment uploads and automating storage in SharePoint with structured folder creation based on Packaging ID using Power Automate, and ensured a seamless, efficient, and scalable system for managing packaging lifecycle operations.

Leave Management System App

- Designed a desktop-based Canvas App for managing employee leave processes, featuring a dynamic gallery and form to provide complete visibility of leave history, balances, and usage details, implemented advanced Power Fx logic to calculate total, used, and remaining leaves, including separate handling of medical leaves with dedicated indicators and year-wise filtering using dropdown selections, enabled date-based and column-level filtering in the gallery to allow users to easily search and analyze their leave records, managed employee data through Dataverse ensuring user-specific data visibility based on login context, integrated REST APIs via Power Automate for seamless data flow, and configured approval workflows that trigger Microsoft Teams notifications and Outlook emails upon leave request submission, enabling efficient and automated leave management.

Job & Inventory Management System (Custom Low-Code App)

Platform / Technology: Zoho Creator, Deluge Scripting, Database Workflows, Relational Data Mapping

- Engineered and deployed a comprehensive, automated Job & Inventory Management Application using Zoho Creator to eliminate manual supply chain tracking and streamline enterprise workflows. Designed a highly scalable relational data architecture to synchronize key modules including Job Masters, Material Acquisitions, Job Sheets, and Dispatches. Formulated complex back-end math logic via Deluge scripting to compute real-time pending queues dynamically (e.g., auto-calculating pending inventory balance when received or dispatched quantities shift). Implemented seamless multi-form data synchronization rules (PO Order Auto PO ID Sync) along with strict server-side and client-side validation mechanisms (Dispatch Limit Validation) to prevent data redundancy and entry errors. Programmed advanced quality control algorithms to isolate sub-form rejection metrics automatically. Developed a suite of granular tracking dashboards and custom reports utilizing multi-layered data grouping, sorting, and conditional formatting to instantly highlight bottlenecks, pending items, and operational delays for business stakeholders.

Kontech - Automation App

- Built a Canvas App allowing users to submit forms with image attachments, leveraging SharePoint Lists for structured data management, implemented attachment functionality for capturing and uploading photos directly within the app, and configured Power Automate workflows to process submissions by converting images into Word documents and further generating PDFs, which were automatically stored in a designated SharePoint location, ensuring streamlined document handling and automation.

Carnival - Cruise Booking & Management App

- Developed responsive Canvas Apps for both desktop and mobile platforms enabling users to explore and book cruise ships for tours, designed intuitive user interfaces for seamless user experience, implemented business logic using Power Fx for dynamic functionality and validations, managed application data using Dataverse with structured tables and relationships, and optimized overall performance to ensure smooth and reliable application usage across devices.
